The role of Modern Science in a Postmodern World

There is much current interest in assessing the role of science in our modern culture, not least in respect of the significance of studying science in our educational system.

~~Scientists~~ Science has been seen as the post as ~~opium~~ an escape from dogmatism and superstition, as the conveyor of rational way of believing. Utopia. It has been challenged by ~~a sequence~~ ~~wave of~~ Continental Postmodernist philosophy, as by ~~not~~ influential ~~ecclesiastical~~ ecclesiastical figures within the fabric of our community.

Science is now widely seen as a socially constructed world view, but with no special legitimacy as contrasted with other ideologies.

This year's Wolfson Debate will attempt to assess both sides of the ~~the~~ issue versus anti-science argument. The main ~~Speakers~~ are Prof. Lewis Wolpert CBE FRS, ~~the~~ ~~author~~ ~~a book~~ ~~from~~ ~~modern~~ ~~science~~ ~~defender~~ of science, and the Emeritus Professor of Genetics at Hertford College Oxford.

A very level debate is anticipated,
in which the audience, under drawn
from the Guard and Humanities Commander,
will be expected to play an important
role an important contribution.
